

Are there new frameworks for labor and management under AI trends?

Isn't the current POTUS denying prior AI policies among the rest of that government's positions? What is the fallout? Also, since Starlink appears to now cover the White House for free, is that symbolic or delphic?

OpenAI had previously announced a .gov version for use by officials. Has that been activated? If so, how is it being utilized? Is it having any good or bad effects? Has it been modified? Is it learning current government, like training models, or is it used for simple decision support, or for strategic planning and ops? How does that relate to StarGate? Also, is that CEO's personality at odds with those of DOGE's head? What is the outcome going to be?

Overall then, how did the first quarter of this year go for AI development and advances? Globally? Are there any expectations for the second quarter? What should organizations plan for? Any ideas for the rest of the year? This platform itself is expected to build out capacity so will that change the equation at all?

Along these lines, what sorts of questions should be in a daily tech and AI brief?

Is there a significant shift of writing skills from tech to AI, and what would be the new heuristics?
